

## MY EXPERIENCE OF MET

Interventional cardiology is an ever advancing speciality and it is difficult to find good training programs which can enhance your skills and impart you the latest ones.

I entered the MET with a hope of doing just that. Here I came in contact with highly skilled teachers. They were more than eager to teach and guide me.

Here I learnt the finer points of endovascular repair of AAAs, complex coronary interventions especially left main and dedicated bifurcation lesions, difficult carotid interventions and all the peripheral endovascular procedures.

The time here has been one of the most fruitful of my life. I have grown here both professionally and personally. Here I was enriched in not only the endovascular way but also culturally. People here have been very friendly and supportive. I was assisted in finding good accommodation and my stay was further made more comfortable with the help of many friends that I formed within the department.

There was good team work and I did a lot of complex procedures, increasing my skills and learning new ones.

I have formed long lasting relationships here and I hope to forge them further with future collaborations.

The beauty of this program is that it can be tailored to one's individual needs. Thus one has the chance of increasing his or her expertise in a particular field. The teachers here are all pioneers. One can thus expect to learn the cutting edge techniques at the hands of these leaders.

MET is an excellent hands on program and I feel, a must for a growing hemodynamic clinician.

Regards
